

Craftons Curved Products - Findings & Strategy

Decision doc. We advertise the Craftons self-serve online builders. The demand evidence comes from CNC Cut's bespoke curved jobs - that's our market intelligence, not what we sell.

How to read this doc (important)

CNC Cut = the bespoke service (send CAD, we quote and cut). It is the SOURCE of our market intelligence - what customers want, how they talk, what converts, what it's worth. CRAFTONS = the products we advertise: self-serve online builders (Radius Pro, Formwork Builder, Architrave Builder) where the customer designs it online, gets an instant price, and we deliver it ready. The goal of all marketing: convert curved-work demand into Craftons builder usage - NOT into 'send us your CAD'.

The Craftons products we're driving traffic to

- **Radius Pro** - 'the world's first interactive online tool to design and manufacture curved formply / plywood / MDF, cut to size.' Hook: 'Struggling with complex curves onsite?'
- **Formwork Builder** - 'Complete Curved Formwork. Configured Online. Delivered Ready to Assemble. Build the whole system - not just the radius.'
- **Architrave Builder** - 'Complete Curved Architraves. Configured Online. Delivered Ready to Install.'
- **Supporting:** Rip Pro (bendy formply, cut to size) and the Arch Kit (pre-assembled CNC-cut arch inserts - 'nail it in, sheet it, done').

Executive summary - the 5 decisions this supports

- **1. Drive traffic to the online builders.** Every ad's job is to get a builder/concreter to USE Radius Pro / the Formwork Builder / the Architrave Builder - design online, instant price, delivered.
- **2. The builders ARE the fix for the quoting bottleneck.** Manual CNC Cut quotes stall; the builders price instantly. Lead with 'instant price online, no quote to wait on'.
- **3. Own the hook you already have:** 'Struggling with complex curves onsite?' - it matches the customer voice exactly.
- **4. Lead with the two proven lines** (Radius Pro curves + curved formwork); push architraves as a high-value niche.
- **5. Keep social value-first; ads direct-response.** The builder is the destination; reduce friction inside it.

Who buys (the builders' target customers)

Curved work is a major, recurring line - ~68 bespoke jobs through CNC Cut prove the demand the Craftons builders now productise:

- **Concreters & formworkers** - curved formwork, seats, insitu walls -> the Formwork Builder. Biggest, least-converted segment.
- **Builders** - curved wall plates / curved sheet material -> Radius Pro. Proven, highest-converting.
- **Joiners** - curved & arched architraves -> the Architrave Builder. Small in number, biggest per job.

What customers ask - and how the builders answer it instantly

- 'How much / what's the l/m rate?' -> the builder gives an **instant price** (no quote wait).
- 'Is this achievable / do I need CAD?' -> **design it in the tool**, no CAD to email.
- 'Turnaround - ready by [date]?' -> priced now, made to order, delivered ready.
- 'Which ply/thickness for a good finish?' -> **built into the builder** (choose material; the system is spec'd).
- 'Can you match my profile / ship interstate?' -> configured to your spec; delivered Australia-wide.

Win / loss & demand (from CNC Cut bespoke jobs = proof of demand)

Product line	Won	Stalled	Win rate	Read
Curves / plates (-> Radius Pro)	24	9	73%	Proven, high volume + best conversion
Formwork (-> Formwork Builder)	14	14	50%	Big demand, half stall - biggest upside
Architraves (-> Architrave Builder)	3	~0	-	Tiny volume, highest value per job
TOTAL	41	23	64%	Curved work is a core revenue line

The dollars

- Average won curved job ~ \$1,450 (range \$455 - \$3,641).
- Architraves = highest value per job (~\$2,300) despite lowest volume - a single \$3,641 job.
- ~\$30k of quotable work sits in the stalled pile - most of which never got a quote out (see below).

The finding that matters most - and why the builders win

On 11 of 12 stalled jobs, NO quote was ever sent - they died at 'plans received, awaiting our quote', not at a customer 'no'. The manual quote step is the leak. The Craftons online builders REMOVE that step: the customer gets an instant price and orders themselves. Driving demand to the builders isn't just marketing - it fixes the single biggest conversion leak.

Advice going forward (prioritised)

- 1. Point every curved-work ad at a builder (Radius Pro / Formwork Builder / Architrave Builder), not at a 'get a quote' or 'email your plans' page.
- 2. Lead with instant pricing + no wait - it's the builders' superpower and the fix for the stall.
- 3. Reduce friction INSIDE the builder (fewer steps, clear inputs, obvious price) - that's the new 'kill the file friction'.
- 4. Own the 'which ply / what finish' expertise in the builder UI + a short guide - it's what customers keep asking; bake the recommendation in.
- 5. Content / social stays value-first (curves onsite, how-to, real jobs) feeding the builders as the soft CTA. (Full doctrine: MARKETING-BIBLE.md.)
- 6. Architraves: a targeted push - high value per job, and the Architrave Builder beats the incumbent's \$200-per-arc setup fee with instant online pricing.
- 7. Interstate: make Australia-wide delivery + lead-time explicit in the builders - interstate demand recurs on bigger jobs.
- 8. Measure net cash + builder conversion (visits -> configured -> ordered), not vanity metrics.

Honest caveat

Some bespoke jobs (very complex geometry, staggered/insitu multi-form walls) may still exceed what a builder can self-serve today - those can overflow to CNC Cut. Worth confirming each builder's capability envelope so the ads promise only what the tool delivers. But the marketing push is the builders.

How to use this pack

This = strategy. The three product docs (Radius Pro, Formwork Builder, Architrave Builder) = the execution layer, each with builder-first copy and multiple headline options. Operating system: MARKETING-BIBLE.md + MARKETING-CHECKLIST.md.
