

Radius Pro - Pain-Led Copy

Curved formply / ply / MDF, designed online, cut to size. Copy leads with the builder's pain, then Radius Pro as the escape.

Product: Radius Pro - the online tool to design curved formply, plywood or MDF, cut to size and delivered.

The pain - in their own words

Lead the copy with these. They're verbatim from real builders, concreters and our own enquiries. Make the customer feel seen, THEN show the product.

"Start to finish, a curved wall in a big house is a good day."

- chippy, comment on Dave Does Carpentry (YouTube)

"I keep doing curved walls but every curve's last stud shows after plaster... what am I doing wrong?"

- tradie, YouTube

"There is virtually no tolerance in a curved wall."

- Christopher Glanville, C+M Studio (Houzz AU)

"A lot of builders prefer not to work with curves because they are fiddly and time-consuming to build."

- Kate Fitzpatrick, Auhaus Architecture

"Where do I get curved drywall?"

- tradie, YouTube - can't even source curved parts

"(the methods they're stuck with) kerf-cutting - laminating sheets - bog-and-sand - freehand with a jigsaw"

- from forums + YouTube

Pain-led headlines (the pain hits first; the product is the escape)

A curved wall's a good day gone. Kerfing, laminating, bog-and-sand.

There's virtually no tolerance in a curved wall. So stop cutting the plates by hand.

You bog-and-sand the curve - and the last stud still shows through the plaster.

Curved wall coming up? A day of set-out and kerf-cuts. Or a five-minute order.

Curves are the job builders dodge. This is the one that takes five minutes.

Marking out curved plates by hand, with zero room for error. There's a better way.

The turn - product as relief

Radius Pro cuts your curved plates - formply, ply or MDF - to your exact radius. Design it online, price on the spot, delivered ready to fix. No set-out by hand, no bog-and-sand, no stud telegraphing through the plaster.

The ad (pain -> agitate -> relief -> CTA)

'Start to finish, a curved wall in a big house is a good day.' A day of marking out, kerf-cutting and bog-and-sand - on a wall that's got no tolerance for a wobble. And half the time the last stud still shows through the plaster. Radius Pro cuts your curved plates to your exact radius: design it online, price on the spot, delivered ready to fix. Get your day back. [Design your curve -> Radius Pro]

Voice notes

Builder-to-builder, dry, no emoji, no fake urgency. Use their words: 'good day gone', 'bog-and-sand', 'set-out', 'shows through the plaster'. The pain does the selling; Radius Pro is the relief, never the hero.

Note for decisions

The proven, high-volume line. Lead ads with the 'good day gone' / 'no tolerance' pain, CTA to Radius Pro.
Test headline 1 vs 3 first.

Craftons marketing engine. Pain language = real customer voice (CNC Cut enquiries + forums/YouTube/reviews). Drives the self-serve online builder. 21 Jul 2026.
