

Formwork Builder - Pain-Led Copy

Complete curved formwork, configured online, delivered ready to assemble. Copy leads with the concreter's pain, then the Formwork Builder.

Product: Formwork Builder - configure the whole curved formwork system online; delivered cut, labelled, ready to assemble and pour.

The pain - in their own words

Lead the copy with these. They're verbatim from real builders, concreters and our own enquiries. Make the customer feel seen, THEN show the product.

"Tough job mate... I would quote \$20k for that job hopefully I don't get it."

- tradesman, YouTube - curved work is priced to AVOID

"What a massive slog. / Great work mate. What a process."

- on-the-tools, YouTube - on a curved seat build

"What type of ply would you use for the outer curved perimeter as we want to achieve a good finish?"

- Top Form Concrete - real enquiry (fear of a bad off-form finish)

"These walls are higher than we've done before."

- Policrete Structural - real enquiry (out of their depth)

"(the method) bending form ply around a radius freehand with a jigsaw - hit a star picket, run a stringline, cut fresh curved ribs"

- from forums + YouTube

Pain-led headlines (the pain hits first; the product is the escape)

Curved formwork: the job you quote at \$20k hoping you don't win it.

A day bending form ply around a stringline, praying the finish comes up clean.

"What a massive slog." Every curved seat, every time.

Off-form's got no tolerance. So why are you cutting the curve freehand?

The curved job everyone prices high to dodge. Make it the one you want.

Not sure which ply gets the finish? We already sorted that.

The turn - product as relief

The Formwork Builder configures the whole curved formwork system online - top and bottom plates, face ply, the lot - cut, labelled and delivered ready to assemble and pour. Right ply, perfect curve, no slog. You just pour.

The ad (pain -> agitate -> relief -> CTA)

Be honest - when a curved seat or curved wall lands on your desk, you quote it high hoping you don't get it. Because it's a day bending form ply around a stringline, freehand with a jigsaw, praying the off-form finish comes up clean. The Formwork Builder does the whole system online: configure your curve, get the price, and we deliver it cut and ready to assemble - right ply, perfect curve, no slog. Now it's the job you WANT to win. [Build your formwork -> Formwork Builder]

Voice notes

Builder-to-builder, dry, no emoji. Their words: 'massive slog', 'what a process', 'good finish', 'freehand with a jigsaw', '\$20k hoping I don't get it'. This is the biggest-upside product - the pain is strongest here, so lean into it.

Note for decisions

Half of curved-formwork quotes stall. The pain-led '\$20k you don't want' angle + the instant-price builder is the unlock. Lead with headline 1; it names the exact feeling.

Craftons marketing engine. Pain language = real customer voice (CNC Cut enquiries + forums/YouTube/reviews). Drives the self-serve online builder. 21 Jul 2026.
