

Curved-Work Marketing - Findings & Strategy

The decision doc. Built from ~68 real curved jobs, dozens of customer enquiries, and win/loss + dollar data. Read this first; the three product docs are the execution layer.

Executive summary - the 5 decisions this supports

- **1. Fix quoting speed - the #1 growth lever.** Most stalled jobs died waiting on our quote, not on a customer 'no'. Faster quotes will beat any copy tweak.
- **2. Ship a real offer.** 'Send your set-out; we cut to your radius, we spec the ply, fits first time or we re-cut free' - plus fast turnaround.
- **3. Own the 'which ply / what finish' question** with a guide - it's the asset customers keep asking for (lead magnet + trust).
- **4. Lead with the two proven lines** (curved wall plates + curved formwork); treat curved architraves as a high-value niche worth a targeted push.
- **5. Keep social value-first, ads direct-response, and the phone in the funnel** - these jobs close by conversation.

Who actually buys (the dream buyer)

Curved work is a major, recurring line - ~68 jobs. Three buyer types, in their own context:

- **Concreters & formworkers** - curved formwork, curved seats, insitu curved walls. Often sourcing on behalf of a builder or landscaper. The biggest and least-converted segment.
- **Builders** - curved top & bottom wall plates, cut to their set-out. The proven, highest-converting segment (repeat buyers: Perfetto, Invoke, Glenvill, LBA, Frameworks, Montegar).
- **Joiners** - curved & arched architraves. Small in number, biggest per job.

What customers actually ask (the FAQ + objection list)

- **'How much / what's the l/m rate?'** - price, almost every time.
- **'Is this achievable / can you cut from my CAD?'** - curved work is treated as the risky, uncertain part.
- **'What's the turnaround - can it be ready by [date]?'** - often urgent.
- **'Which ply/thickness for a good finish?'** - they want us to be the expert, not just a cutter.
- **'Can you match this profile/design?'** and **'Can you ship interstate?'**

The #1 friction is files: 'screenshots won't work - got a PDF or DXF?'. And these jobs convert by **conversation** - phone-first, then email. The online builder / instant price is the soft entry, not the whole funnel.

Win / loss & demand

Product	Won	Stalled	Win rate	Read
Radius Pro (curved wall plates)	24	9	73%	Workhorse - high volume + best conversion
Curved Formwork / Concrete	14	14	50%	Big demand, half stall - the opportunity
Curved Architraves	3	~0	-	Tiny volume, highest value per job
TOTAL	41	23	64%	Curved work is a core revenue line

The dollars

- **Average won curved job ~ \$1,450** (range \$455 - \$3,641).

- **Architraves** = highest value per job (~\$2,300) despite lowest volume - a single \$3,641 job. The 'gap' is actually the best margin-per-job line.
- ~\$30k of quotable work sits in the stalled pile - most of which never got a quote out.

The finding that matters most: the quoting bottleneck

The biggest leak is our quote step, not the market. On 11 of 12 stalled jobs, NO quote was ever linked - they died at 'plans received, awaiting our quote', not at a customer 'no'. Quoting faster (even a same-day lineal-metre ball-park) is almost certainly a bigger conversion win than any offer or copy change.

Advice going forward (prioritised)

- **1. Quote-out speed** (ops, but the #1 marketing multiplier): a same-day ball-park + templated l/m rates for common curved-plate jobs; never let an enquiry sit un-quoted.
- **2. The offer:** lead with speed + finish + 'we spec the ply' + fit guarantee. For concreters, it must beat their own in-house method (they can build formwork themselves).
- **3. Content / lead magnet:** the 'which ply, what radius, what finish' guide - they keep asking; it builds trust and captures the 97% not ready to buy.
- **4. Kill file friction:** accept PDF, DXF, or a marked-up photo; make the online builder the easy soft entry.
- **5. Channels:** social stays value-first; ads are direct-response; keep the phone in the loop. (Full doctrine: MARKETING-BIBLE.md.)
- **6. Architraves:** a targeted push - low volume, high value, and a competitor charges a \$200-per-arc setup fee we can undercut.
- **7. Interstate freight:** sort freight/lead-time - it recurs on the bigger-ticket jobs (Sydney, QLD, SA).
- **8. Measure net cash + quote-to-job conversion,** not vanity metrics (ROAS/CPL). See the bible's scoreboard.

How to use this pack

This doc = the strategy. The three product docs (Radius Pro, Curved Formwork, Curved Architraves) = the execution layer, each with copy notes and multiple headline options. The operating system behind it all is MARKETING-BIBLE.md + MARKETING-CHECKLIST.md in the repo.

Craftons marketing engine - built from first-party data (ClickUp Job List + customer enquiries + Quotient) and market research. 21 Jul 2026. Full working docs: [repo research/market-intel/](#).
